	Document Title	Application Guide
	Application Name	Image-Converter
	Version	1.0
	Written By	Vlad Feldfix

1. RUN

1.1. This application converts any given image to a different format

1.2. Press 1 and Enter to RUN the application

1.3. Insert the format your images are currently

1.4. Insert the format you want your files to be

1.5. While the program runs, it will tell you what format it detected from the given image. Sometimes the format detected might be different from what it's celled. In such a case insert the detected format in the given format.

1.6. For example: if the image is called image.jfif but the application says: the detected format is JPEG, insert JPEG (uppercase) as current format instead of jfif. And jpeg as the requested format.

2. SETTINGS

2.1. Fill the settings.txt file according to the provided example:

2.2. Origin > D:\Users\Image-Converter\jfif

2.3. Destination > D:\Users\Image-Converter\jpeg

3. HELP

3.1. Open the help file

4. EXIT

4.1. Exist the application
